

Corrie MacColl Plantations Overview

Corrie MacColl plantations employs a modern approach to fair and sustainable natural rubber farming across three plantations in Cameroon and Malaysia: Hevecam, Sudcam and JFL.

We invest in agronomical expertise and technology to maximise yield and quality, whilst minimising impact through low-intensity planting. As a sustainable model corporate citizen, ecological conservation, economic growth and social development are at the forefront of our operations strategy.

Sustainability

Corrie MacColl is committed to promoting, developing and implementing the sustainable and responsible use of natural rubber throughout its supply chain.

Please refer to our Sustainable Natural Rubber Supply Chain Policy (SNRSCP) for further information.

Sustainability Highlights:

70% of our land remains unplanted

25,000 ha Community Forest

No peat land

Global no deforestation policy across Corrie MacColl Plantations

Commitment to no slash and burn

Ensure responsible land acquisition and use

Commitment to good agricultural practices and yield improvement

Develop and implement proper land use plans to prevent overexploitation of natural resources using an integrated landscape management approach

Support the development of methods to trace natural rubber across the supply chain

Community engagement through local NGOs to address grievances

Initiatives governed by an independent Cameroon Sustainability Council

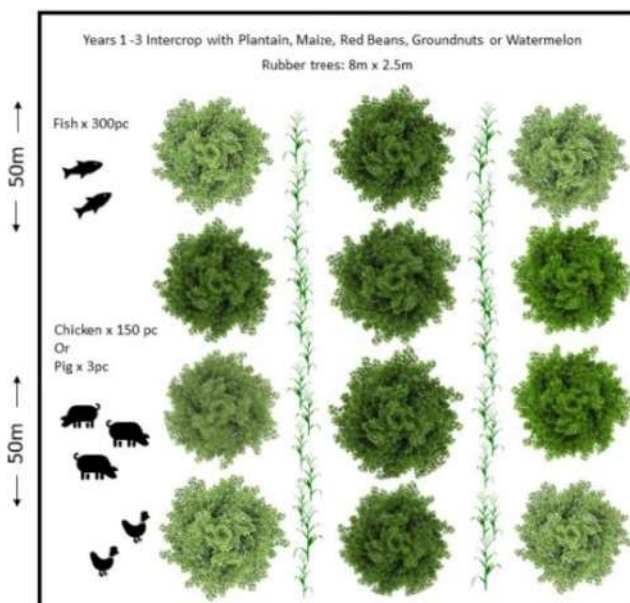

The Cameroon Outgrower Programme

Corrie MacColl recognises the value of smallholder partnerships in opening new market opportunities and strengthening rural economies.

- 13,000 smallholders to benefit
- 27,000 hectares of fallow land to be planted
- All land must comply with our Sustainable Natural Rubber Supply Chain Policy (SNRSCP)
- Land within High Conservation Value or High Carbon Stock areas will be excluded, and appropriate land deeds must be secured prior to development.

Commenced	2020
Outgrower farmers	13,000
Planting programme	2020 - 2027
Initial tapping expected	2025
